

CAPITAL REVIEWS / OUR ENVIRONMENT continued

Grindrod has partnered with HP, which maintains our computers, to dispose of obsolete technology. HP collects our electronic waste every six months.

Our recycling initiatives include a project in Maputo port, in which the sweepings from our operations are used to make bricks.

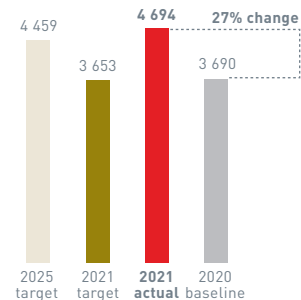

Although water usage increases as our activities ramp up, we are working to improve our water usage efficiencies.

Grindrod has contracted water treatment specialists to find ways and means of reducing our reliance on municipal water resources at the Richards Bay terminals.
